

# Apache

## Proste konfiguracje

### Sprawdzenie konfiguracji

```
/etc/init.d/httpd configtest
```

```
lub
```

```
apache2ctl configtest
```

### Vhost SSL

```
<VirtualHost *:443>

...

SSLEngine on
SSLCertificateFile /etc/ssl/server.crt
SSLCertificateKeyFile /etc/ssl/server.key
SSLCACertificateFile /etc/ssl/ca.crt

...

</VirtualHost>
```

## PHP via FCGID + SuEXEC

### Konfiguracja Apache

```
<VirtualHost *:80>

    SuexecUserGroup kamil users

    ErrorLog /home/services/httpd/users/kamil/test.com.pl/error.log
    TransferLog /home//services/httpd/users/kamil/test.com.pl/access.log

    <Directory /home/services/httpd/users/kamil/test.com.pl/htdocs>
        Options ExecCGI Indexes Includes FollowSymLinks MultiViews
        AllowOverride All
        Order allow,deny
        Allow from all
        AddHandler fcgid-script .php
        FCGIWrapper
```

```
/home/services/httpd/users/kamil/test.com.pl/fcgid/php.fcgi .php
</Directory>

ServerAdmin kamil@test.com.pl
DocumentRoot /home/services/httpd/users/kamil/test.com.pl/htdocs

ServerName test.com.pl

</VirtualHost>
```

## Struktura katalogów

```
chown -R kamil:http /home/services/httpd/users/kamil
chmod -R 710 /home/services/httpd/users/kamil
chown kamil:http /home/services/httpd/users/kamil/test.com.pl/{htdocs,tmp}
chmod -R 750 /home/services/httpd/users/kamil/test.com.pl/{htdocs,tmp}
chown kamil:users /home/services/httpd/users/kamil/test.com.pl/fcgid
chmod -R 711 /home/services/httpd/users/kamil/test.com.pl/fcgid
```

Plik /home/services/httpd/users/kamil/test.com.pl/fcgid/php.fcgi:

```
#!/bin/sh

export PHP_FCGI_CHILDREN=4
export PHP_FCGI_MAX_REQUESTS=500
exec /usr/bin/php.fcgi $@
```

Uprawnienia:

```
chmod 700 /home/services/httpd/users/kamil/test.com.pl/fcgid/php.fcgi
chown kamil:users
/home/services/httpd/users/kamil/test.com.pl/fcgid/php.fcgi
```

## Restartujemy Apache i sprawdzamy

```
/etc/init.d/httpd start
Uruchamianie usługi Apache 2.2 Web Server (prefork).....[
